Early Treatment Update

We have been very pleased with the results we have achieved in our early treatment phases. In the past we used removable appliances such as Frankels and Bionators. Today, we use fixed appliances to expand the upper and lower arches. If there is a protrusion, we use the expander in combination with the Herbst appliance. This gives us all of the benefits of both appliances with 100% patient cooperation.

It is important to remember to refer these patients between the ages of seven and nine since the expansion must be accomplished before the upper and lower cuspids erupt.
